COMP3667: Reinforcement Learning Practicals 8-10

Research, implementation, feedback, and guidance

robert.lieck@durham.ac.uk

Information

These practicals are aimed to give you time to conduct independent research and receive feedback on your coursework. In particular, you discuss and ask questions to the lectures about papers, your proposed solution, or even ask for help debugging code and interpreting experimental results.

Please remember to work independently on your proposed agent and paper, however you are welcome to discuss technical concepts, lecture material, and theory covered within papers with those around you.

If you have struggled with material covered in the previous practicals, or if you are feeling overwhelmed with the coursework, this would be an excellent time to revisit the previous material or ask for further assistance.
